ear feul (ca Gery),

Harlier I wrote you about SECT: 308. If enclose a copy of it end FBL D-57, a copy of the openish original and a letter to Simmons asking for the original envelope. I ask no distrubition or comment except to Cary (please copy for min) and, if you think it worthwhile, emery Brown, who has a kind of expertise in such matters.

this is all v-ry strange. The memo seems to be by Kelley, yet it is drafted in a way to disguise it and is not on any of the many appropriate printed forms the foresighted government surplies in limitless quantities. It has no location indicated (clearly Dallas or rlington). It is addressed to no one. It draws no conclusions, makes no suggestions. Techna this latter so clearly refers to a conspiracy, the foregoing is particularly strange.

It is no less clearly a fake, as the internal evidence shows. Yet suppose this letter was smalled and is postmarked 11/28. Is there anyons in the world who minn't know all about aswald, then safely dead and why the 11/10 date if it were not to a we been mailed for 18 more days?

I wonder if there is any significance in the signature? Then you see wel, without telling nim why (or without his telling Bernardo why), it might be interesting to know who ledro theres might bo? Is there, for example, some functionary in Cuben intelligence with this name? I believe if not done by a nut this letter was sent by someone plotting against Cube or to frame them with repandibility to the assessination, and the selection of a real verson's name would help this scheme.

The smudge on the bot om of the copy of the original is regular in ghape. I do not the what causes it. he of the thing with which is seems consistent is piece of worth tape (perhaus lagic tape, having teen placed there without being burnished. This causes such anadows

at is a fascinoting buliness. I'd welcome your thoughts.

It strikes a as and well that this is not indicated as in any other . files, such as one of the many of cost R's.

If and when I get the envelope, I'll send it.

Sincerely,
